# IT Grup

Backend Developer

Mission: You need to assemble the movie site

The technologies you will use:

1. HTML 5
2. CSS
3. JavaScript
4. Asp.Net Core 3.1

A picture of the site is attached for example:

1. A simple design should be made for the pages. The main page should display 10 movies of your choice.

2. Fetch movie information from API.

Send all data requests to:

http://www.omdbapi.com/?apikey=[yourkey]&

Poster API requests:

http://img.omdbapi.com/?apikey=[yourkey]&

you can look here for an example - http://www.omdbapi.com

3. When you click on the movie, it will be redirected to the information page.

4. The information page has to contain an Order button, and when you click on it, it will be redirected to the Order confirmation page.

5. An email address should be input when you place an order (place it within the information page with order button), and a confirmation message should be sent to the entered email address when you click the Order button.

After compilation all source code should be uploaded to GitHub and given access to: *aghabey, mirivhbv* users.

If there is any question, please do not hesitate to contact us by mail.
